## USE OF HEAT SHOCK PROTEINS TO DELIVER MOIETIES INTO CELLS

## ABSTRACT OF THE DISCLOSURE

The present invention relates to a method of delivering a moiety of interest into a cell comprising contacting the cell with a complex comprising the moiety of interest covalently linked to a heat shock protein, under conditions appropriate for entry of the complex into the The invention also relates to a method of delivering a moiety of interest into a cell capable of taking up a 10 complex comprising the moiety of interest covalently linked to a heat shock protein comprising contacting the cell with a complex comprising the moiety of interest covalently linked to a heat shock protein, under conditions 15 appropriate for entry of the complex into the cell. Also encompassed by the present invention is a method of delivering a moiety of interest into an antigen presenting cell comprising contacting the cell with a complex comprising the moiety of interest covalently linked to a heat shock protein, under conditions appropriate for entry 20

of the complex into the cell.
